## HHS emPOWER Program

*emPOWERing Communities, Saving Lives*

The HHS emPOWER Program, a partnership between ASPR and the Centers for Medicare and Medicaid Services, provides dynamic data and mapping tools, as well as training and resources, to help communities protect the health of more than 4.2 million Medicare beneficiaries who live independently and rely on electricity-dependent durable medical and assistive equipment and devices, and essential health care services.

 Preparedness

 Response

 Recovery

 Mitigation

emPOWER's innovative tools support state, territory, local, and community efforts to anticipate, prepare for, and respond to the access and functional needs of at-risk individuals throughout the emergency management cycle.

### HHS emPOWER Map, REST Service, and emPOWER AI

A public, interactive map that displays the total number of at-risk electricity-dependent Medicare beneficiaries in a geographic area, down to the ZIP Code. A **Representational State Transfer (REST) Service**, provided via ASPR's **GeoHEALTH** platform, allows users to consume the same map data layer in their own geographic information system. Users can also request HHS emPOWER Map data and Program information by using **emPOWER AI on Google Assistant** and **Amazon Alexa**.

Publicly accessible at <https://empowermap.hhs.gov/> for:  
 Acquiring population-level situational awareness; conducting emergency planning activities; developing emergency response systems, processes, and triggers; and planning for life-saving outreach.

Scan this QR code to access the map!

### HHS emPOWER Emergency Planning De-identified Dataset

A tool that provides the monthly total number of Medicare claims for select electricity-dependent durable medical and assistive equipment and devices, as well as essential health care services, in a geographic area, down to the ZIP Code.

*(This dataset cannot be used to identify individuals)*

Provided monthly to public health authorities for:  
 Acquiring population-level situational awareness; conducting emergency planning activities; developing emergency response systems, processes, and triggers; identifying planning factors; identifying resources for emergency scenarios; and planning for life-saving outreach.

### HHS emPOWER Emergency Response Outreach Individual Dataset

A secure and restricted tool that can be officially requested by a public health authority to support life-saving assistance and outreach public health activities in the event of an incident, emergency, or disaster. It contains limited individual-level beneficiary information and health care provider information.

Securely transmitted to authorized public health authorities upon approved official disclosure request for:  
 Activating emergency plans; deploying response assets and resources; activating emergency communications networks; and conducting life-saving outreach.

Contact [empower@hhs.gov](mailto:empower@hhs.gov) for more information

Updated: 3/29/2020

## CDC's Social Vulnerability Index (SVI)

A tool to identify socially vulnerable communities

**CDC's SVI**

**What is social vulnerability?**  
 Every community must prepare for and respond to hazardous events, whether a natural disaster like a tornado or disease outbreak, or a human-made event such as a harmful chemical spill. A number of factors, including poverty, lack of access to transportation, and crowded housing may weaken a community's ability to prevent human suffering and financial loss in a disaster. These factors are known as social vulnerability.

**What is CDC's Social Vulnerability Index?**  
 ATSDR's Geospatial Research, Analysis & Services Program (GRASP) created databases to help emergency response planners and public health officials identify and map communities that will most likely need support before, during, and after a hazardous event.

CDC's SVI uses U.S. Census data to determine the social vulnerability of every census tract. Census tracts are subdivisions of counties for which the Census collects statistical data. The SVI ranks each tract on 15 social factors, including poverty, lack of vehicle access, and crowded housing, and groups them into four related themes. Maps of the four themes are shown in the figure below. Each tract receives a separate ranking for each of the four themes, as well as an overall ranking.

**SVI Themes**

**How can CDC's SVI help communities be better prepared?**  
 The SVI can help public health officials and local planners better prepare for and respond to emergency events like hurricanes, disease outbreaks, or exposure to dangerous chemicals.

CDC's SVI databases and maps can be used to:

- Estimate the amount of needed supplies like food, water, medicine, and bedding.
- Help decide how many emergency personnel are required to assist people.
- Identify areas in need of emergency shelters.
- Plan the best way to evacuate people, accounting for those who have special needs, such as people without vehicles, the elderly, or people who do not understand English well.
- Identify communities that will need extra funding and support before, during, and after a disaster.

Maps show the range of vulnerability in Gwinnett County, Georgia for the four themes.

For more information, please contact CDC's SVI Coordinator ([svi\\_coordinator@cdc.gov](mailto:svi_coordinator@cdc.gov)) or visit <http://svi.cdc.gov>.
